

Appropriate fabrics for your pets

aquaclean extreme fabrics have a structure designed to facilitate cleaning, plus they have a **Safe Front®** treatment that prevents the proliferation of bacteria and mites.

Health, hygiene and well-being

Bacteria and mites really do proliferate if you have pets at home. But **Safe Front®** is a fantastic ally against these organisms, which can cause allergies, especially in children and the elderly.

Longer lasting

These collections have a physical barrier – a layer between the fabric loops and the top visible part of the fabric which prevents accidental snagging caused by jeans rivets, zippers or rings.

Easy maintenance

The surfaces of these collections are completely smooth, which facilitates the removal of pet hairs from the fabric.

These fabrics are not indestructible, but they do help to prolong your sofa's lifespan.

Live your sofa without worries

let life[®] happen!

Advantages of using aquaclean fabrics for my pet

At **aquaclean extreme** we want to make your life easier, so your sofa can remain free from stains, scratches and smells from your household pets. We love animals too, and that's why we've developed a series of collections to make living with a pet easier and minimising their effects on your sofa fabric.

Durability

The fabric structure prevents occasional snags, such as typical snags caused by jeans rivets or zippers. Thus, **aquaclean extreme** fabrics offer better performance in homes with pets. However, they are not completely infallible against unwanted pet behavior, nor are they indestructible or safe against cats' claws and scratching.

Easy cleaning

Our fabric incorporates **aquaclean® technology**, which helps to remove normal household stains easily and quickly. In addition, with household pets in mind, **aquaclean extreme** has put its fabric through pet urine, fecal and blood tests, with outstanding stain removal results.

Hair removal

Due to their structure **aquaclean extreme, fabrics** are antistatic fabrics, and tend to prevent hair and fur from sticking. But even if you don't allow your pet to get on the sofa, some hair may be left around the bottom borders. To remove this hair, you can use a damp cloth or a vacuum cleaner, although you can also try a lint roller.

Smells

If your pet uses the sofa continuously, this can cause bad odours. To avoid this, **aquaclean extreme** recommends ventilating the room regularly, vacuuming the fabric regularly and using an air freshener if necessary.

Discover the most appropriate fabrics and collections for your pets, with a wide range of colors, plain and printed, and with the **guarantee of the aquaclean® technology**.

These fabrics cannot be guaranteed against possible destruction by your pet".*

Advice for living with a pet

Your sofa is the heart of your home, and pets can be very territorial, so you'll have to decide if you want your pet on your sofa! Cats may mark them, dogs will love jumping up on them. Pets sometimes have very different behaviour patterns, and you have to bear this in mind. The best thing you can do is to train your pet or pets to do what you really want them to do - or not to do!

1

Avoid scratching

Try placing or rubbing orange peel on your fabric, as the smell of citrus fruit is usually unpleasant for pets.

2

Train your pet

Buy a scratching post for your cat or cats and get them to use it. To achieve this, spray on some enticing catnip or valerian. They're sure to love it. And don't forget to praise them afterwards!

3

Pet hygiene I

Trim your cat's claws regularly so they don't try to sharpen them on your sofa.

4

Pet hygiene II

Brush your pet regularly. All hair you throw in the rubbish won't be left on your sofa!

5

Proper nutrition

Ensure good nutrition, as an inappropriate diet can cause excess hair loss. This will also prevent them from getting sick and give them improved quality of life.
